01 · EXECUTIVE SUMMARY

The idea in one page

Trail Seek is a mobile adventure platform where people discover, book and safely enjoy treks, hikes and outdoor adventures, all in one place, and are rewarded for every journey they complete.

Today an adventurer has to search scattered sources for an activity, call to check whether a slot is free, find enough friends to meet a minimum group size, guess the weather, and then hope nobody gets separated on a trail with no mobile signal. Trail Seek replaces that whole chain with a single, unified system.

1

Unified booking

Treks, hikes, rafting, kayaking, coracle rides, cycling, camping, safaris and stays: one account, one checkout, one ticket.

2

Live availability

Real-time slots and capacity, instant confirmation and a QR ticket that works offline at the gate.

3

Team Up

Mark interest in a date and get matched with other adventurers to meet minimum group sizes. Nobody misses a trek for lack of company.

4

Digital Rope

Phone-to-phone Bluetooth links every member of a group with no mobile network. If someone falls behind, the group knows within seconds.

5

Gamified progression

XP, levels, badges, achievements and an avatar that grows with every adventure, so people come back.

6

Live weather

Forecasts and trail conditions for the exact place and time slot, with alerts before and during the trip.

> **Two problems nobody else solves together: "I can't book, I don't have enough people"** (Team Up) and **"What if someone gets lost on the trail?"** (Digital Rope).

Where we start

Trail Seek launches in **Kerala**, beginning with the forest eco-tourism programmes of **Thrissur district**: Athirappilly–Vazhachal, Peechi–Vazhani, Chimmony and Chulannur, which cover guided forest treks, coracle rides, cycling and nature stays. From there it expands across Kerala, then the Western Ghats and the rest of India.

USD 16.7 bn

17.8%
Forecast growth (CAGR), 2025–2033

2.29 crore
Tourist visits to Kerala, 2024

02 · THE PROBLEM

Why adventure travel is hard today

Interest in outdoor adventure is growing fast, but the experience around it is fragmented, uncertain and, on the trail itself, sometimes unsafe.

Scattered discovery

Activities are spread across operator pages, social media posts and word of mouth. Prices, timings and rules are hard to find and often out of date.

No live availability

Travellers cannot see free slots or capacity in real time. They call ahead, travel on a guess, or arrive to find a programme full or closed.

Minimum group sizes block solo travellers

Many guided treks run only for a minimum number of people. A forest trek at Vazhachal, for example, needs at least four. Someone with one friend, or travelling alone, simply cannot go.

People get separated on trails

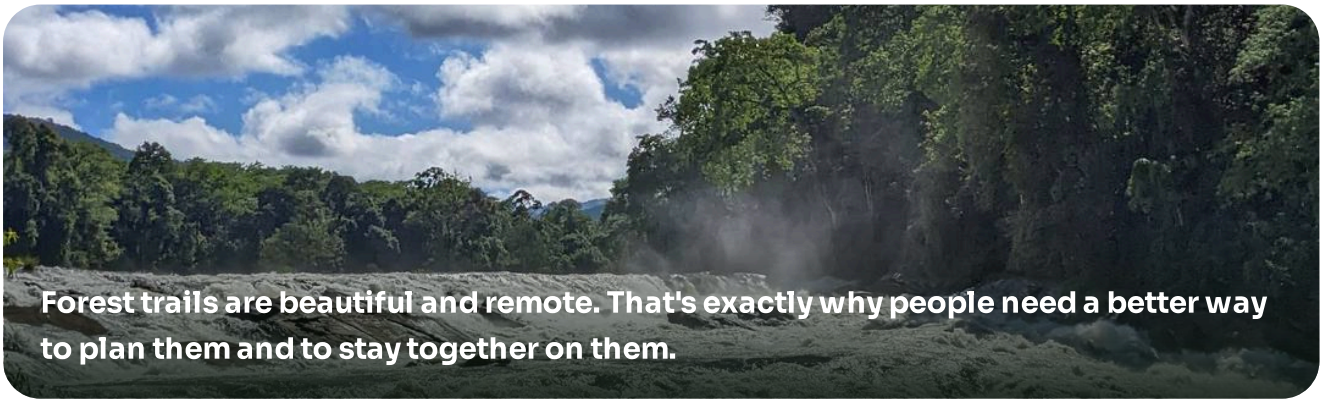

Forest trails often have no mobile signal. When a member falls behind or takes a wrong turn, the group may not notice for a long time, and calling them is impossible.

Weather surprises

Rain, mist and heat change trail safety by the hour, especially in the monsoon. Generic forecasts are not tied to the trail, the slot or the activity.

No reason to return

A completed trek leaves nothing behind: no record, no progress, no recognition. Most adventurers do one trip a year and forget the platform they used.

Forest trails are beautiful and remote. That's exactly why people need a better way to plan them and to stay together on them.

What Trail Seek stands for

Vision

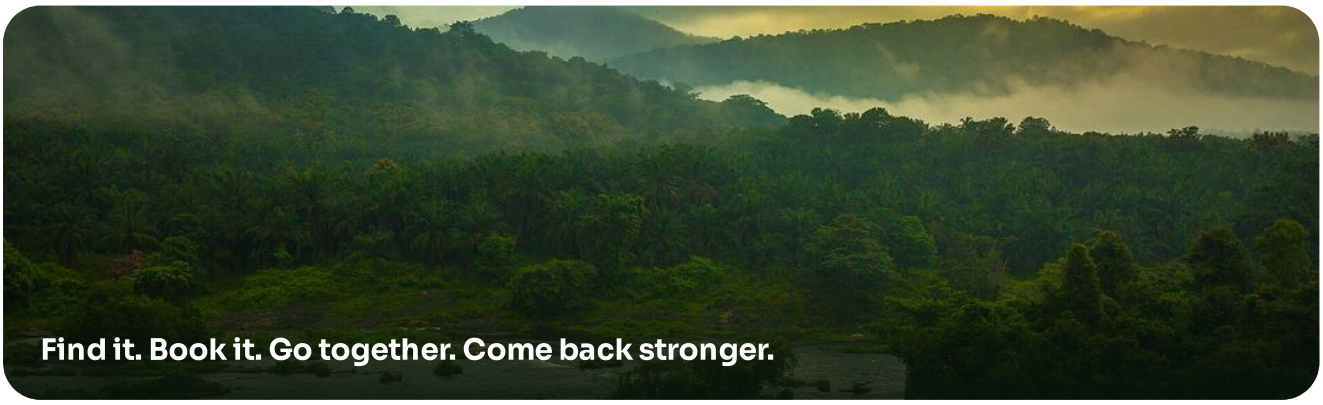

To be the platform every adventurer opens first: the place where outdoor journeys are found, shared, completed safely and celebrated.

Mission

To make adventure easy to book, possible for anyone regardless of group size, safe even without a network, and rewarding enough to do again.

Our principles

Principle	What it means in the product
No one left behind	Group safety is a core feature, not an add-on. Every group session can be linked by the Digital Rope.
One system, every adventure	One account, profile, wallet, ticket format and progress system across every activity type and operator.
Honest information	Real prices, real availability and real risks for every activity. No trail is presented as easier or safer than it is.
Adventure for everyone	Team Up opens group-only experiences to solo travellers, couples and small groups.
Earned, not bought	Levels, badges and avatar gear are unlocked by doing real adventures, safely.
Respect for nature	Capacity limits, permits and forest rules are built into booking; responsible behaviour is rewarded.

04 · THE PLATFORM

One unified system, six pillars

Trail Seek is not a booking site with extras. It is one connected system: what you book, who you go with, how you stay safe and what you achieve all feed into each other.

Pillar	What it does	How it connects
Unified Booking	Every adventure type in one catalogue with one checkout and one QR ticket.	A booking creates the group, the weather watch and the XP opportunity.
Live Availability	Real-time slots, capacity and closures.	Feeds Team Up so open seats can be filled by matched adventurers.
Team Up	Interest pools per activity and date; matching to meet minimum group sizes.	A completed team becomes a booked group with a Digital Rope session.
Digital Rope	Bluetooth group link with alerts, SOS and live positions, no network required.	Safe completion earns XP and badges; incidents inform trail safety data.
Gamification	XP, levels, badges, achievements, avatar progression and leaderboards.	Rewards bookings, completion, safety and community. Drives repeat use.
Live Weather	Slot-level forecasts, trail conditions and alerts.	Shapes booking advice, reminders and on-trail warnings.

One identity across everything. An explorer has one profile that holds their bookings, tickets, teams, trek history, level, badges and avatar. The same profile works for a coracle ride at Peechi and a peak trek in the Western Ghats.

Adventure categories at launch and next

Trail

Guided forest treks, day hikes, ridge walks, peak climbs, night treks, birding walks

Water

Coracle rides, kayaking, rafting, bamboo rafting, waterfall visits

Wild and stay

Wildlife safaris, cycling trails, camping, tree houses, forest stays

05 · UNIFIED BOOKING AND LIVE AVAILABILITY

Every adventure, one checkout

Coracle rides, forest treks and stays: booked the same way, in under two minutes.

01
Discover
Browse by state, district, destination or activity type; filter by difficulty, price and duration.

02
Check slots
A live calendar shows open dates, time slots and remaining capacity.

03
Build the party
Adults, children, students and add-ons like parking or camera, with a live total.

04
Pay
UPI, cards or net banking, with clear cancellation rules shown before payment.

05
Ticket
Instant QR ticket and short code, stored offline for the gate.

What every activity page carries

- **Exact pricing:** package or per-person rates, extra-person charges, entry, parking and camera fees.
- **Timings and slots:** reporting time, duration, group limits and minimum group size.
- **Preparation:** how to reach, terrain, best season, gear list and a pre-trip checklist.
- **Safety:** risks, dangerous sections, wildlife notes and emergency numbers for that place.
- **Navigation:** map, directions and offline map download.

Live, not static

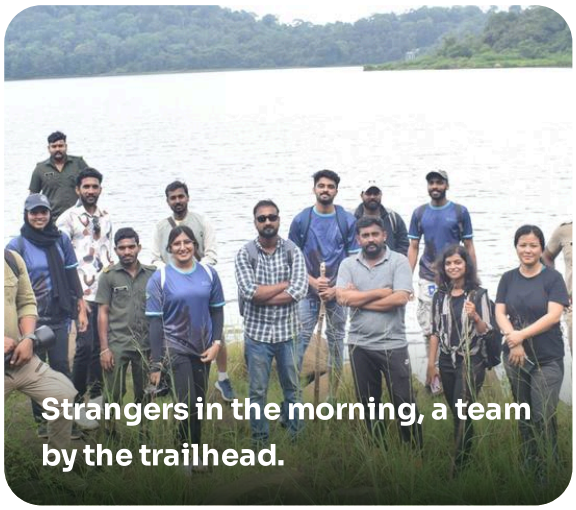

- Capacity updates in real time as seats are booked, so slots never oversell.
- Closures, for weather, wildlife or maintenance, show immediately and trigger automatic rescheduling or refunds.
- "Next trip" reminders, the ticket and the weather for that slot appear on the home screen.
- Operators maintain rates, slots and capacity from their own side.

06 · TEAM UP **CORE FEATURE**

Never miss a trek for lack of company

Many guided programmes run only for a minimum group size. Team Up lets anyone mark interest in an activity on a date, and fills the remaining places with other adventurers who want the same trip.

> **Example: a Vazhachal forest trek, minimum four people.** Anu wants to go on Saturday but is on her own. She opens the trek, picks Saturday and taps **"I'm interested"**. Three other adventurers see an open Saturday team, **1 of 4**, and join. When the fourth person joins, the team is complete: everyone is confirmed and booked together, and the group is ready on the day.

Strangers in the morning, a team by the trailhead.

How it works

- **Interest pools:** every activity and date has a visible pool showing how many people have joined and how many are still needed.
- **Seat hold:** joining holds a place; payment is taken only when the team reaches the minimum.
- **Cut-off:** if the team isn't full by its deadline, nobody is charged and members are offered the nearest filling date.
- **Smart nudges:** people who saved the activity or live nearby are told when a team is nearly full.

01
Mark interest
Pick the activity and date; your place is held.

›

02
Team is visible
Others see "1 of 4" on that date and join.

›

03
Minimum reached
Every member is charged and confirmed together.

›

04
Meet the team
Profiles, levels and a team chat unlock before the day.

›

05
Go together
The team becomes a Digital Rope group on the trail.

Trust and safety in teams

Verified profiles, levels and ratings are visible before the day. Teams can be **women-only** or **beginner-friendly**, guides lead every guided programme, and anyone can report or block. Phone numbers are never shared.

07 · DIGITAL ROPE **CORE FEATURE**

No one gets lost on the trail

The Digital Rope links every phone in a group over Bluetooth Low Energy. It needs no mobile signal, no internet and no pairing, and it works between Android phones and iPhones.

Always connected

Each phone sends a small heartbeat every couple of seconds and listens for everyone else's. Members also relay what they hear, so the link reaches people beyond direct range.

Live positions and paths

Phones share GPS positions with each other over Bluetooth. Every member sees the group on a satellite map with each person's path and live distance, even without signal.

Start and end together

Only the organizer starts and ends a session. Members can ask to start; when the organizer accepts, every phone counts down and starts at the same moment.

One-tap messages

"I'm OK", "Wait for me" and "Need help" reach every phone in range instantly, with no network.

How separation is detected

Connected	Weak	Falling behind	Separated	Critical
Heard within seconds	Signal fading	About 20 s quiet	About 60 s quiet	About 3 min, no reconnection

When someone is missing

- The organizer and the group get an **alarm, with sound and strong vibration**, that repeats until someone responds. It's not just a quiet notification.
- The member's **last known position** and path are shown on the map so the group can turn back to the right place.
- The member who has fallen behind is warned too: "Your group is moving away".
- An SOS from any member reaches every phone in range and can be passed along by other phones.

Why it matters

Forest trails are where mobile networks fail and where people most often get separated. Calling a lost member is impossible there. The Digital Rope works exactly where calls don't, turning "we noticed an hour later" into "we noticed in under a minute".

Every adventure levels you up

Trail Seek turns outdoor life into a game worth playing: each completed adventure earns experience, unlocks badges and grows the explorer's own character.

Explorer avatars. Every user picks a trekker character and grows it as they progress.

What earns XP

- Completing a booked adventure, scaled by distance, elevation gain and difficulty.
- Finishing as a group with no separations: a **safe-team bonus**.
- Firsts: first trek, first water activity, first new district, first peak above 1,500 m.
- Streaks and seasonal quests (for example a "Monsoon Falls" trail series).
- Helping others: filling a Team Up spot, posting trail reports, good team ratings.

What it unlocks

- **Levels** with titles that show experience at a glance.
- **Badges** such as Peak Hunter, Forest Ranger, River Explorer and Group Leader.
- **Achievements** for longest trek, highest altitude and total distance.
- **Character sheet:** an archetype and skill levels in trekking, hiking, water and cycling.
- **Leaderboards** by district, state and friends, plus rank on Top Explorers.
- Partner perks: discounts and early access to new trails for higher levels.

Lv 1–5
Trail Rookie

Lv 6–14
Pathfinder

Lv 15–24
Summit Keeper

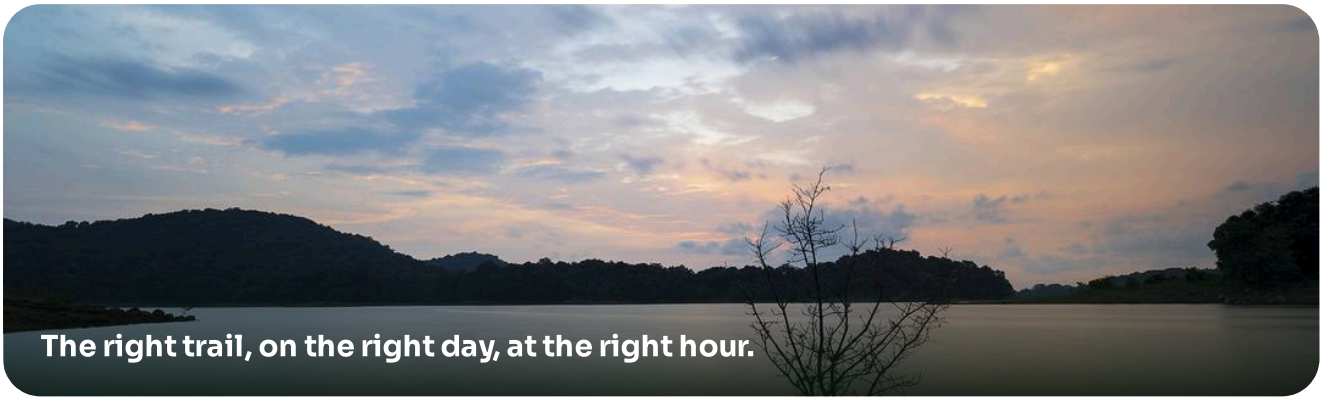

Lv 25–39
Ridge Master

Lv 40+
Legend of the Ghats

Why gamification here works: adventure already has natural achievements, like distance, altitude, new places and teamwork. Trail Seek records them automatically and makes them visible, so one trip a year becomes a progression people want to continue.

09 · LIVE WEATHER AND TRAIL CONDITIONS

Plan with confidence

Slot-level forecast

Temperature, rain probability, wind and visibility for the exact destination and time slot, not just the nearest city.

Alerts before you go

Heavy rain, thunderstorm or heat warnings for your booked date, pushed 48 hours, 24 hours and on the morning of the trip.

Closures and rescheduling

If an activity is closed for weather, the booking is moved or refunded automatically and the team is told at once.

Best time to go

Season guidance and "best days this week" suggestions on every activity page, plus monsoon-only experiences such as waterfall trails.

On-trail warnings

During a session, worsening conditions are shown to the whole group. With no signal, the last forecast is kept on the phone.

Trail reports

Recent explorers post conditions such as leeches, slippery rocks or high water, which earns them XP and keeps the next group informed.

Adventure is social

Trail Seek's community turns individual trips into shared stories and new teams.

Feed

Photos and stories from completed adventures, with likes and comments; filter by All, Following or Nearby.

Explorer profiles

Avatar, level, badges, archetype, skills, records and full adventure history in one public character sheet.

Follow and discover

Follow explorers, see what they book, and join their open Team Up teams.

Top Explorers

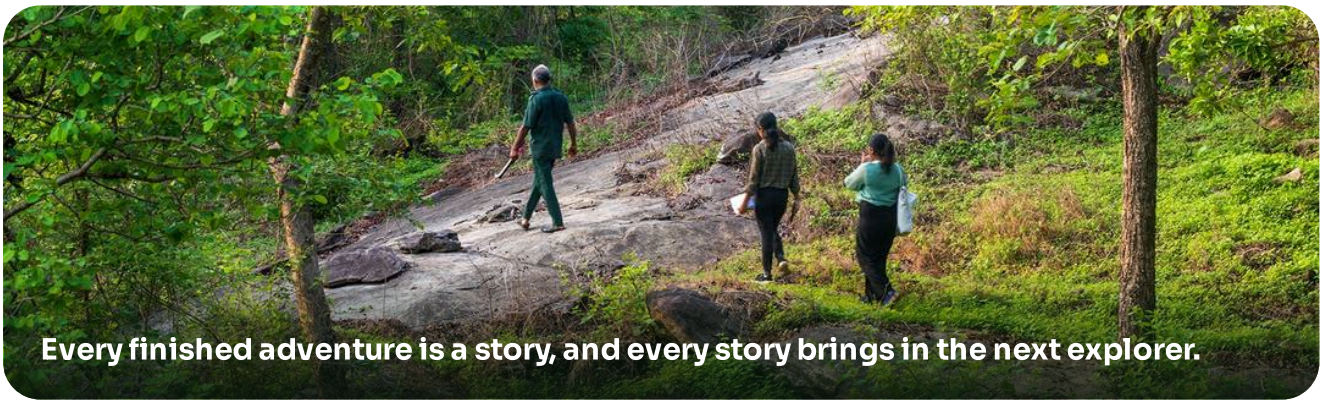

Leaderboards by XP and rank that celebrate the most active and safest adventurers.

Groups

Create a group for a trip, invite by code or QR, and run it as a Digital Rope session on the day.

Moderation

Reporting, blocking and content review keep the community welcoming and safe.

Every finished adventure is a story, and every story brings in the next explorer.

11 · THE USER JOURNEY

From idea to summit to story

Stage	What the explorer does	What Trail Seek does
Inspire	Scrolls the feed, sees a friend's waterfall trek.	Shows the same trek, its price, the next open dates and any open team.
Plan	Picks a date and checks the weather.	Live slots, slot-level forecast and best-day suggestions.
Team Up	Has only one friend; minimum is four. Marks interest.	Opens a team on that date and fills it with matched explorers.
Book	Pays once the team is complete.	Confirms everyone together; issues offline QR tickets.
Prepare	Reads the gear list and meets the team.	Checklist, weather alerts, offline maps and team chat.
Go	Starts the trek with the group.	Digital Rope links every phone; live map, paths and alarms if anyone drifts.
Celebrate	Finishes and shares a photo.	Records the trek, awards XP, badges and avatar progress, and posts to the feed.
Return	Sees a quest one step from the next level.	Suggests the next adventure and an open team for it.

> **The loop:** inspiration leads to booking, booking to a safe group adventure, the adventure to rewards and a story, and the story inspires the next explorer. Every feature feeds the next.

A large market, growing fast

USD 16.7 bn
India adventure tourism market in 2024 [1]

USD 86.1 bn

Who we serve

Segment	Need	Trail Seek answer
Students and young professionals	Affordable weekend adventures; often short of a full group.	Team Up, levels and leaderboards, community.
Solo travellers and couples	Access to group-only programmes; safety with strangers.	Team Up with verified profiles and Digital Rope.
Families	Easy, safe, well-informed outings.	Clear pricing, difficulty, weather and group safety.
Clubs, colleges and companies	Large group bookings and coordination.	Group booking, roster and Digital Rope for big groups.
Visitors from other states and abroad	Trustworthy local information in one place.	Unified catalogue, honest content and offline tickets.
Operators and destinations	Fuller slots, fewer no-shows, safer groups.	Live capacity, Team Up demand and safety reporting.

13 · COMPETITIVE ADVANTAGE

What makes Trail Seek different

Others solve one piece: booking, maps or social. Trail Seek is the only platform that brings booking, group formation, offline group safety and progression into one system.

Capability	General travel booking apps	Trek operator pages	Maps and fitness apps	Chat groups	Trail Seek
All adventure types, one checkout	Partial	No	No	No	Yes
Live slots and capacity	Partial	Partial	No	No	Yes
Match strangers to meet minimum group size	No	No	No	Informal	Yes
Group safety with no mobile network	No	No	No	No	Yes
Live group map and paths offline	No	No	Solo only	No	Yes
Levels, badges, avatar progression	No	No	Fitness only	No	Yes
Slot-level weather and closures	No	Partial	General	No	Yes
Community tied to real trips	No	No	Partial	Partial	Yes

Defensible strengths

- **Network effects:** every new explorer makes Team Up fill faster and the Digital Rope relay stronger.
- **Hard technology:** reliable cross-platform Bluetooth group safety took real engineering and field testing to build.
- **Data that compounds:** trail conditions, completion times and safety events make the platform smarter every season.
- **Local depth:** curated, verified content and partnerships destination by destination, starting in Kerala.

14 · BUSINESS MODEL

How the platform earns

Booking commission

A percentage of each booking paid by the operator, plus a small convenience fee per ticket. This is the primary revenue line.

Trail Seek Pro

Optional membership: offline maps for whole regions, extended Digital Rope features, priority Team Up, member discounts and trip insurance.

Partner promotions

Featured placement for operators, stays and new destinations, clearly labelled and never mixed into safety information.

Groups and institutions

Packages for colleges, clubs and companies: bulk bookings, managed teams and Digital Rope for large groups.

Gear and services

Commissions on gear rental, guides, transport and insurance offered at the point of booking.

Insights for destinations

Aggregated, anonymised visitor and safety reports for destinations and authorities that want to plan capacity and safety.

The loop drives the economics: gamification brings users back cheaply, Team Up turns lost demand into bookings, and the Digital Rope earns the trust of families and first-timers.

Key metrics we track

Metric	Why it matters
Bookings and gross booking value	Core revenue driver
Team Up fill rate and time to fill	Proof that matching unlocks new demand
Repeat adventurers within 90 days	Shows whether gamification is working
Digital Rope sessions; time to detect a separation; reconnection time	Safety performance and trust
Ratings per activity and per team	Quality and community health

Built for the outdoors

Trail Seek is built to work where adventure happens: in forests, on rivers and on ridges, often with no network at all.

One app for Android and iPhone

A single cross-platform codebase delivers the same experience on both, with native Bluetooth, GPS and notifications.

Offline-first

Activity details, tickets, maps, tracking and the Digital Rope all work without a connection, and sync when one returns.

Secure cloud platform

Managed authentication, a relational database with per-record access rules, encrypted storage and real-time updates.

Bluetooth group mesh

Low-energy advertising for heartbeats plus short data exchanges for the member list, positions and start and end signals. No pairing, Android and iOS together.

Location and tracking

Battery-aware GPS recording of distance, elevation and path, with a foreground service so tracking continues with the screen off.

Live data

Real-time availability and weather feeds, operator integrations through secure APIs, and alarm-grade notifications for safety events.

Engineering quality

- Automated test suite covering booking, pricing, progression rules, group sync and the Bluetooth data formats.
- Safety thresholds can be tuned from configuration and are calibrated with field tests.
- Security review and QA built into every release; privacy by design.

Kerala first, then beyond

Launch: Thrissur district

Trail Seek launches with the forest eco-tourism programmes of Thrissur district at **Athirappilly–Vazhachal, Peechi–Vazhani, Chimmony and Chulannur**. These include guided forest treks, coracle rides, cycling, waterfall visits and nature stays, 22 programmes in all, many of which need a minimum group size. That makes them an ideal first home for Team Up and the Digital Rope.

Phase	Scope	Focus
Phase 1 Pilot	Thrissur district	Closed pilot with invited explorers and guides; Digital Rope field calibration; live payments; booking confirmation flow with destinations.
Phase 2 Kerala	Idukki, Wayanad, Munnar, Palakkad and more	Public launch on Android and iOS; Team Up at scale; Malayalam; weather alerts; operator dashboard.
Phase 3 Western Ghats	Tamil Nadu, Karnataka, Goa	Operator network; Pro membership; institutional packages; trail reports.
Phase 4 India	Himalaya and national circuits	Multi-day expeditions; insurance and gear partners; national leaderboards and seasonal quests.

Growth channels

Campus and clubs

Adventure clubs, NSS and NCC units, and college fests, with team leaderboards.

Creators and guides

Trek leaders and outdoor creators sharing trips and Team Up links.

Built-in virality

Every open team, badge and finished trek is shareable and brings in new explorers.

Milestones

When	Milestone
Nov 2026	Thrissur closed pilot; content review with destinations; payment sandbox
Dec 2026	Live payments; booking confirmation integration; Malayalam
Jan 2027	Public beta on Play Store and App Store; Team Up public; weather alerts
Feb 2027	Operator dashboard; more Thrissur attractions; first seasonal quest
Mar 2027	Public launch for the season; expansion to the next Kerala districts

Our commitments

Honest safety information

Risks, dangerous sections, wildlife notes and emergency contacts are required fields on every activity. No trail is presented as safer than it is.

Location stays in the group

Positions are shared only between members of the same active group, and only during the session. They are never sold or shown publicly.

Safe teams

Verified profiles, ratings, women-only and beginner-friendly teams, in-app messaging without sharing phone numbers, reporting and blocking.

Guides and rules first

Guided programmes are always led by authorised guides. Trail Seek supports them and never replaces them. Permits and capacity limits are built into booking.

Data protection

Encryption in transit and at rest, per-record access rules, minimal data collection, account deletion in the app, and a published privacy policy.

Respect for nature

Leave-no-trace guidance, rewards for responsible behaviour, and capacity limits that protect sensitive forest areas.

The Digital Rope is a safety aid, not a guarantee. It is designed to detect separation early and help a group regroup, alongside guides, briefings and good judgement.

What we watch

Risk	Mitigation
Bluetooth behaviour varies by phone model	Testing across devices, configurable thresholds, field calibration in the pilot, and relaying between members to extend range.
iPhone background limits	A data-exchange path that keeps working in the background; guidance to keep the app open during sessions; locked-screen field tests.
Team Up teams don't fill	Cut-off rules with no charge if a team doesn't fill, nudges to interested users, and suggestions for the nearest filling date.
Safety of meeting strangers	Verified profiles, ratings, women-only teams, guided programmes, in-app chat and quick reporting.
Prices or rules change at the source	Live operator integrations; scheduled data refresh; clear "last updated" stamps.
Overbooking a slot	Real-time capacity with seat holds during payment; reconciliation with destinations.
Seasonal demand (monsoon)	Monsoon-specific experiences, weather-led rescheduling, and expansion to regions with different seasons.
Payment disputes	Licensed payment gateway, automatic refunds, and cancellation rules shown before payment.

The people behind Trail Seek

Shad

Founder · Product, Engineering and Security

Leads product vision and builds the platform, including the Digital Rope and the gamification engine.

Amalu

Quality Assurance and Cybersecurity

Owns testing, release quality and security reviews across the app and cloud platform.

Ashna

Content and Location Research

Researches destinations, programmes, safety notes and partnerships, and keeps every activity accurate.

What we are looking for

- **Destination partners** to bring their programmes, slots and capacity onto the platform.
- **Pilot support** from guides and destinations for the Thrissur launch and Digital Rope field tests.
- **Payment and insurance partners** for live bookings and trip cover.
- **Investment and mentorship** to scale from Kerala across the Western Ghats.

20 · CONCLUSION

Why now

Adventure tourism is one of the fastest-growing parts of travel, and Kerala is one of India's most-visited states. Yet the people who want these experiences still struggle to find them, to fill a group, and to stay together once they are out there.

Team Up

Turns "we don't have enough people" into a booked team.

Digital Rope

Turns "someone is missing" into "we found them in a minute".

Gamified, unified system

Turns one trip a year into a journey people keep coming back to.

Live booking and weather

Turns guesswork into confident plans.

Trail Seek: every adventure, one app, and no one left behind.
